

OKL Magis rose sets

Rose set with PZ hole pattern

Material: Stainless steel

- Complete set incl. base roses and screws
- Edge radius: 0.5 mm ▪ Door thickness (TS): 38 - 45 mm
- Rose depth: 9 mm ▪ Other door thicknesses on request

Model	OKL Magis
ER	5030022436

Rose set with BB hole pattern

Material: Stainless steel

- Complete set incl. base roses and screws
- Edge radius: 0.5 ▪ Door thickness (TS): 38 - 45 mm
- Rose depth: 9 mm ▪ Other door thicknesses on request

Model	OKL Magis
ER	5030026402

Rose set UG

Material: Stainless steel

- Complete set incl. base roses and screws
- Edge radius: 0.5 ▪ Door thickness (TS): 38 - 45 mm
- Rose depth: 9 mm ▪ Other door thicknesses on request

Model	OKL Magis
ER	5030047413

WC rose set SK

Material: Stainless steel

- Complete set incl. square spindle and screws
- Edge radius: 0.5 ▪ Door thickness (TS): 38 - 42 mm
- Rose depth: 9 mm ▪ Other door thicknesses on request

Model	OKL Magis
ER	5030021253

Product information and use of ECO fitting technology

§ 1 Product information and intended use

1. The fitting systems made by ECO are assistive systems that can be used to help with opening and closing motions and/or locking processes for doors, glass doors and window elements.
2. The fixing elements supplied with these products must be used and installed according to the mounting instructions/specifications.

§ 2 Improper use of the products

Improper use of fitting systems for doors and windows (i.e. not using the product as intended) includes the following situations in particular:

- Installation or mounting of foreign objects and/or objects not intended for this purpose into the fitting system;
- Using auxiliary tools to operate the system;
- The fittings are used as a replacement for a missing wall buffer;
- Fittings are misused as a suspension device for heavy loads;
- Fittings are used long-term in combination with panic locks instead of only in emergencies, against the recommendation of the lock and fitting industry;
- Surface of the fitting systems damaged by the use of sharp or hard objects;
- The usage of fixing elements made by third-party manufacturers.

Sooner or later, these errors will cause damage, and the products will no longer have the characteristics defined by the manufacturer.

§ 3 Product performance

1. Product performance is only partially governed by standards. Many aspects of product performance have been developed based on years of experience and should be considered common knowledge in the construction hardware industry. Correspondingly, the contents of these standards and these empirical values should also be applied to fittings that are not expressly regulated.
2. Specifically, the following standards apply:
 - EN 1906: General benchmarks for door fittings and accessories;
 - DIN 18273: Special rules for fire and smoke control doors;
 - DIN 18257: Minimum security requirements for security fittings.
3. The fitting system must be replaced if, despite maintenance and servicing, it can no longer be ensured that it will function properly, and/or it may pose a risk of injury.
4. Furthermore, the products are continuously being improved, and manufacturing is subject to quality assurance. The right to make technical changes is reserved.

§ 4 Product maintenance

1. The user must ensure that the fitting systems and fixing elements are installed in a proper functional manner.
2. Depending on the material and where they are used, the products will face a certain degree of natural wear and tear. Consequently, all moving parts must undergo maintenance at least once per year; i.e. the proper fit, stability of the screw connections, etc. must be checked on a regular basis. Only water, gentle cleaning agents and other cleaning agents that do not contain corrosive ingredients should be used for cleaning the fitting systems.
3. Manufacturing primarily uses the materials nylon, aluminium, stainless steel and brass. Please note that each of these different materials has different maintenance and servicing requirements.

§ 5 Duty to inform and instruct

1. The following documents are available to provide information and instruction:
 - Catalogues and brochures;
 - Tender documents;
 - Procurement information;
 - Bid documents;
 - Installation and operating instructions;
 - DIN standards.
2. In order to ensure that the fitting systems function properly:
 - Architects, planners and any other people involved in the process are required to request all the necessary product information from us and to comply with said information,
 - Specialised retailers are required to observe the product information and notes in the price lists and catalogues and, in particular, to request all required instructions from us and to pass them on to the processors,
 - The processors are required to obtain all product information and to comply with it, and, in particular, to request the operating and maintenance instructions from us and pass them on to the customers and users.

Overall, all parties involved must ensure that the fitting systems are properly assembled and installed and that each end user receives proper instructions and explanations.

ECO

ECO General information

ECO recommends:

- For lever handle sets without a return spring, we recommend using locks that comply with **DIN 18251**- class 3 or higher.
- In order to minimise the clearance between the lever handle set and the lock, we recommend locks that comply with **DIN 18251** with a clamping nut.
- When ECO fittings are properly installed and used, the paint should withstand daily use. Excessive contact with hard or sharp objects (such as key rings, rings, etc.) can scratch the surface. This does not impact the functionality, however.
